Production work: bomba.md · sportlandia.md · tehnotrend.md · unde.md · elwoodtransport.com

SUMMARY

Senior backend engineer with 10+ years of experience. I own Bomba.md in production — 1.5M+ products, 1M+ users — scaled from 10,000 to 100,000+ concurrent users. I built the company's self-service checkout from scratch (41 terminals across 32+ stores, integrated with bank terminals, fiscal printers and bill acceptors) and I run that fleet in production. My work sits where high-load backend, payment and fiscal hardware, and AI features that actually ship all meet.

SELECTED RESULTS

- Scaled an e-commerce backend from 10,000 to 100,000+ concurrent users — layered caching, search rework, async queues, horizontal scaling; page load improved up to 5×
- Built a self-service checkout system from scratch: 41 terminals, 32+ stores, bank terminals, fiscal printers, bill acceptors
- Cut in-store checkout to ~10 seconds via QR-based customer data entry and on-the-spot scanning
- Grew terminal orders 3×; today 50%+ of all in-store purchases go through self-service
- Own production for the entire terminal fleet: outages under once a month network-wide, average recovery 2–5 minutes
- Shipped AI to production, not to a demo: visual product search by photo and an AI shopping assistant
- Built SEO infrastructure handling crawler traffic and indexing across 1.5M+ products

TECHNICAL SKILLS

Domains: E-commerce & retail, marketplaces, classifieds, logistics & transport, custom ERP

Backend: PHP, Laravel, Symfony, Yii2, CodeIgniter, Node.js, Python · REST & SOAP APIs, DDD, SOLID, OOP

Data & search: MySQL, PostgreSQL, Redis, Elasticsearch, Algolia

Messaging & API: Kafka, RabbitMQ, Swagger/OpenAPI, Sanctum, API Resources, Spatie/laravel-data

Infrastructure: Docker, Kubernetes, CI/CD, AWS (S3, SES), Sentry, PHPUnit

AI: OpenAI API, RAG, vector search, LLM integration in production

Hardware: SerialPort, Arcus (bank terminals), CashCode (bill acceptors), Datecs (fiscal printers), Electron

Integrations: Partner and supplier data imports via REST/SOAP, CSV/XML and direct database connections · payment and fiscal hardware protocols, ERP systems, loyalty platforms (SailPlay, UDS), Google Maps & OAuth, Twilio/SMS, OneSignal, SendGrid/Mailgun, Trello API

Also: Vue.js, React, Flutter, Google Analytics 4, Google Ads

EXPERIENCE

Tehnosoft Sistem · Chişinău, Moldova · Hybrid · Mar 2024 — Present

Senior Software Engineer (promoted from Senior Software Developer, Sep 2025)

Holding of e-commerce and retail brands across Moldova and Romania. I own the Bomba.md platform (1.5M+ products, 1M+ users) and the company's self-service terminal systems.

- Scaled the platform from 10,000 to 100,000+ concurrent users, with individual page speed improved by up to 5×: layered Redis caching, Elasticsearch with reworked query and index strategy, heavy work moved to async queues (Kafka, RabbitMQ) and horizontal scaling in Kubernetes
- Designed, built and shipped the self-service checkout system end to end as its sole engineer: 41 terminals across 32+ stores, integrating bank terminals, fiscal printers, bill acceptors and other peripheral hardware
- Run the fleet in production: monitoring and healthchecks across all 41 terminals, remote diagnostics and updates with no on-site visits; outages no more than once a month network-wide, average recovery 2–5 minutes
- Cut checkout to ~10 seconds — customer details are captured by QR code and pull through to the terminal automatically, with products scanned on the spot
- Freed physical stores from their shelf stock: any location can now sell the entire 1.5M+ network catalog instead of only what is on site. Terminal orders grew 3×, and 50%+ of in-store purchases now go through self-service
- Built AI Visual Search in-house (product lookup by photo) and integrated an AI assistant for automated customer support
- Designed and built the delivery system from scratch with real-time order tracking, plus scalable SEO infrastructure for crawler traffic and indexing across 1.5M+ products
- Sole engineer on the terminal platform: I make the architecture calls myself and answer for them in production. Across the wider engineering team I review code, mentor mid- and junior-level developers, and take part in technical interviews

Stack: PHP, Laravel, Symfony, CodeIgniter 3, MySQL, PostgreSQL, Redis, Elasticsearch, Algolia, Kafka, RabbitMQ, Docker, Kubernetes, CI/CD, AWS, Sentry, PHPUnit, Vue.js, React, Node.js, Electron, OpenAI API

Projects: bomba.md · sportlandia.md · tehnotrend.md (BOSCH)

Unde.md · Chişinău, Moldova · Hybrid · Mar 2023 — Mar 2024

Senior Software Developer

Turkish classifieds and marketplace startup (Turkey, UK). Working language: English.

- Built backend functionality in PHP (Symfony / Laravel / Yii2): categories, filters and listing search. Load-tested to 10M users with ~100K active listings in production and no performance degradation
- Developed the seller dashboard — purchases, sales, inventory and delivery management — and real-time buyer-seller chat
- Shipped a cross-platform Flutter app to the App Store and Google Play; containerised the entire environment with Docker
- Mentored colleagues in web development and testing

Stack: PHP, Symfony, Laravel, Yii2, MySQL, Docker, Flutter

Projects: unde.md

Amigo · Chişinău, Moldova · Hybrid · Aug 2022 — Mar 2023

Senior Software Developer

Moldovan marketplace (Moldova, US).

- Built a catalog processing and sorting system handling 1M+ records with no performance degradation
- Migrated the catalog from JSON storage to SQL and optimised queries, speeding up data processing several times over
- Launched the website from scratch and built the Flutter app (iOS + Android) with backend integration

Stack: Laravel, PHP, MySQL, PostgreSQL, Flutter

Prestacall SRL · Chişinău, Moldova · On-site · Feb 2020 — Aug 2022

Senior Software Developer

Elwood Transport — logistics and transport management platform for French clients (France, UK).

- Automated order management and shipment tracking: hundreds of orders processed daily
- Optimised database queries and server integrations for high-demand workflows; integrated the platform with client systems for real-time data exchange
- Built a cross-platform Flutter app from scratch, used by a fleet of 100+ drivers

Stack: Laravel, PHP, MySQL, Flutter, Dart

Projects: elwoodtransport.com

DIS Software · Chişinău, Moldova · On-site · Jun 2018 — Feb 2020

Full Stack Developer

Web and mobile development for clients in Moldova, Canada and the UK.

- Delivered 15+ client projects in under 2 years: e-commerce sites, corporate portals and custom ERP systems
- Integrated ERP systems with clients' existing platforms and automated order processing, removing manual handling for e-commerce clients
- Optimised server-side processes and database queries for high-load systems

Stack: PHP, Laravel, Vue.js, JavaScript, MySQL

Projects: man.md · cort.md · petclub.md

Crawless Pte. Ltd. · Chişinău, Moldova · On-site · Jan 2017 — Jun 2018

Full Stack Developer

Distributed data collection and automation for international clients (UK, US, Moldova, Romania).

- Built distributed scraping infrastructure on edge computing: ~20 sources, 15,000+ pages per day
- Automated order processing for a US dropshipping client, removing 80–90% of their team's manual work

Stack: PHP, Laravel, Python, Node.js, PostgreSQL, Docker

Projects: crawless.com · greenshop.md · veloxi.md

Upwork · Remote · Freelance · May 2015 — Jan 2017

Full Stack Developer / Web Designer

- Landing pages, template development and WordPress sites, web and logo design, JavaScript animations. Clients in Moldova, US, UK, Canada and Kuwait
